

User Web Portal

Selecting User Portal Mode

The User Portal operates in either 'Old style' or 'New style'. The system defaults to the old style. Changing the style is a system wide setting (you can't have some users on one and some on the other).

To change the User Portal mode, login to the system as a superadmin and click System -> Admin Settings and select the mode at the bottom of the page as seen in the following screen shot:

The screenshot shows the sipXcom Administration Configuration page. At the top, there is a navigation bar with tabs for USERS, DEVICES, FEATURES, SYSTEM, and DIAGNOSTICS. The SYSTEM tab is selected. The page title is "Administration Configuration" and there is a "Show Advanced Settings" link. The configuration is divided into several sections:

- Logging Level:** Set to NOTICE (Default: NOTICE)
- System Audit:** Checked (Default: checked). Description: Enables system audit.
- Password Policy:** Set to Empty Password/VM Pin Fields (Default: Empty Password/VM Pin Fields). Description: When user is created, password and vm pin can be either blank (Empty policy) or automatically have default values from below (Default values policy).
- Default Password:** An empty text input field. Description: Default value for password that is automatically set when user is created.
- Default Voicemail Pin:** An empty text input field. Description: Default value for voicemail pin that is automatically set when user is created.
- Account name authentication:** Unchecked (Default: unchecked). Description: Enables the option to authenticate using account name.
- Email address authentication:** Unchecked (Default: unchecked). Description: Enables the option to authenticate using the email address.
- Web Portal:** Two radio buttons: "Old style web portal" (unchecked) and "New web portal" (checked). A red arrow points to the "New web portal" option. Below the radio buttons is an "Apply" button.

On the right side of the page, there is a note: "When an advanced Administration Configuration setting is changed, and apply button is pressed, please restart config service".

At the bottom of the page, there is a footer with the following text: "sipXcom 1410201502260316142015-02-26EST03:02:35 localhost.localdomain) update 1 Builds made available to sipXcom Community by eZuce Incorporated. Portions Copyright (C) 2014 SIPfoundry Licensed under AGPL v3".
