

# Homer FAQ

**Homer is an Open Source SIP Capture server that is integrated within sipXcom. This powerful application is a primary tool for troubleshooting issues related to sipXcom and its agents and packages.**

## How do I repair errors in the Homer mysql database

Login to the system as root. From root run "mysqlcheck --all-databases -uroot -p" This will return the name of the tables that are damaged in the database. From the command prompt run "mysql -u root". At the sql prompt run "REPAIR TABLE *tablename*;"

## Default Homer Password

If you change the Authentication scheme option to "Homer managed", the default username is test@test.com and the password is test123.
