

Conference Web Service

This REST service is available starting with version 4.4

API

Base URL: `https://{user id}:{password}@{host name}:8085/conference/{conference-name}`

URL	METHOD	Description
<code>/{command}/{arg 1}/{arg 2}...</code>	PUT w/no body	<p>send conference commands to freeswitch Available FreeSWITCH commands and their arguments:</p> <pre>list [delim <string>] xml_list energy <member_id all last> [<newval>] volume_in <member_id all last> [<newval>] volume_out <member_id all last> [<newval>] play <file_path> [async <member_id>] say <text> saymember <member_id> <text> stop [<current all async last>] [<member_id>] dtmf [<member_id all last>] <digits> kick [<member_id all last>] mute [<member_id all last>] unmute [<member_id all last>] deaf [<member_id all last>] undeaf [<member_id all last>] relate <member_id> <other_member_id> [nospeak nohear clear] lock unlock dial <endpoint_module_name>/<destination> <callerid number> <callerid name> bgdial <endpoint_module_name>/<destination> <callerid number> <callerid name> transfer <conference_name> <member id> [...<member id>] record <filename> norecord [<filename all>] pin <pin#> nopin</pre>

Examples

Lock a conference with name "mirceaConf"

```
curl --digest -k -X PUT https://200:123@localhost:8085/conference/mirceaConf/lock
```
